### Partners in Conservation

With continuing pressure being placed on wildlife habitats, the need for more research to assist our endangered species has never been more vital. David Fleay Wildlife Park is keen to work with partners in conservation. DFWP offers educational opportunities through our *Research in Action* initiative. Individuals and corporations are also encouraged to explore the many ways they can become directly involved in supporting our vision of protecting endangered and vulnerable species for future generations.

For further details regarding our *Partners in Conservation* program contact:

Sue Beckinsale, General Manager, DFWP on (07) 55762411, or email
